

JS Assignment - 1 (Function and Arrays and their built in methods)

1. Given a string "Azad Ram Madiha Yash". Return a string with the first letter of every word from the string. (Use built in methods).
2. Given an array [1, -4, 12, 0, -3, 29, -150]. Calculate the sum of all positive numbers (use built in array methods).
3. Given an array [1, 2, 3, 4, 5]. Create a new array with the square of each element(use built in array methods).
4. Write a function called multiplyBy that takes a number as input and returns a new function that multiplies any number passed into it by the original number. (hint: return function from mentioned function)
5. write a JS program to check if a string is a pangram or not.
